

External Alarm Light & Horn

An external alarm light with combination audible horn is an electronic device designed to alert operators and other personnel both visually and audibly to a specific danger.

Most commonly an external alarm light and horn is used with a gas leak detector to warn of gas leaks before entering a structure or room.

Features

- Single compact unit for wall mounting
- Rotating strobe light with red housing
- Audible horn
- Weather resistant

Available Models

- GA-AL1S-110 (110V AC)
- GA-AL1S-220 (220V AC)

Optional accessory for use with the Hydro Instruments series GA-170 and GA-171 gas leak detection equipment.
